Advanced

react-redux, webpack, extjs, d3, gulp
apache nginx
spring, springmongo, hibernate

Database

Intermediate

oracle mongodb

Others

Advanced

agile, scrum git, svn

Editor

Advanced

vscode

WORK EXPERIENCE (5)

Lead Software Engineer | Fortris

November 2023 - Current

payment crypto kafka performance

- Performance Optimization: Stress test with gatling to identified and resolved performance bottlenecks
- Enhanced system reliability with Logs, Tracing, Alert
- Stakeholder Coordination: Worked closely with development, operations, and product teams to align performance goals, gather requirements, and communicate progress effectively

Lead Software Engineer | Propine

April 2022 - November 2023

payment crypto nodejs typescript temporal rabbitmq datadog ecs aws

- Integrated with 3rd parties Genesis Trading, Mekle-Science, Signature Bank, etc.
- Enhanced system reliability by DataDog Observability (Alert Monitoring, Logs, Trace)
- Migrated legacy to modern single page web app (from Rails to Nextjs)
- Developed and maintain microservices (aws ecs, datadog, nodejs, rabbitmq)

Software Engineer | Flow

June 2021 - April 2022

<https://flownetworks.io/>

vue datadog java typescript aws

🇵🇸 Every Payment is a Real-Time Engagement Opportunity. Flow enables issuers to reach, engage and retain their customers by nudging consumers to use their product and service again, again and again.

The intuitive and powerful Flow Platform is built on top of any payment feed enabling issuers to engage with their customers, multiple times a day, based on their their real-time payment behavior.

Responsibilities:

- Bring wow, a-ha moment to end-users by developing awesome widgets, ui components
- Work on Micro-Frontend modules, build various ui widgets to embedded in mobile and re-use in many places
- Get the best experience to customers by coordinating with designers, product owners, and members in team

Senior Software Engineer | TymeGlobal

June 2019 - June 2021

<https://www.tybank.co.za/>

fintech banking agile (less) react, redux storybook java springboot microservice kafka aws

🏦 Tyme is building a multi-country digital bank focused on emerging markets in Asia and Africa. TymeGlobal partners with in-country local partners to launch next-generation digital banks.

PROJECTS (2)

MoreTyme - Buy now, Pay later

<https://www.tybank.co.za/personal-banking/accounts/moretyme/>

fintech banking agile (less) java springboot microservice kafka aws

🛒 MoreTyme is a Buy Now, Pay Later service for TyBank customers. You pay half the item's purchase price at the till point and take it home straight away. Then pay the rest in 2 equal payments over 2 months.

- Designed, developed, and released distributed banking system with Microservice architecture, k8s, AWS cloud-native service.
- Integrated with 3rd parties (Electrum, Mambu, Zapper, Pick n Pay).
- Developed scheduled jobs to generate the bill and send them to customer
- Experienced with Kafka, Event-Driven architecture.
- Wrote scalable serverless application with AWS (s3, msk, lambda etc)

Business Banking

<https://www.tybank.co.za/business-banking/>

business banking single page application react, redux storybook springboot aws

- In charge of the development and quality of internet banking, a single-page web application.
- Built reusable UI components and document them by Storybook.
- Brought awesome features to customers. E.g: send2many, bulk payment - send money up to 30 invoices at one.

Senior Software Engineer | SecuTix | ELCA

March 2015 - May 2019

<https://www.secutix.com/>

ticketing agile react, redux java widget

SecuTix is a Global provider of a Ticketing Engagement Platform that helps organizations boost ticket sales and enhance audiences experience before, during, and after events. Our customers are Opéra National de Paris, the UEFA, Centre Pompidou, Aspro Parks, Saracens, Paléo Festival, and more.

- Responsibilities:
 - Did work-breakdown structure for User Story, defined impact, implemented new features.
 - Coordinated with the customer support team to analyze and fixed incidents in production.
 - Did code review together in the team.
 - Optimized the performance of the Seat Map - a web module to visualize the stadium, cinema, theater to the application.
 - Developed a large-scale widget in a mono repo.
- Technologies:
 - HTML5, CSS3, JavaScript, Extjs, JQuery, D3, canvas, svg, react-redux, jest, enzyme, Webpack, Babel, Gulp, Storybook, NPM/Yarn, monorepo, styled component.
 - Java, Spring, Hibernate, Oracle, NoSQL (MongoDB).
 - CI/CD: Jenkins.

PROJECTS (2)

Seat map

html5 canvas svg d3 extjs

- A Frontend module, that helps operator draw and interact with seats which are visualized from a big stadium. Some big seat map with more than 80 000 seats, that means we have to find a way to deal with a big DOM element in application but have to keep good performance for the operator.
- Developing as a widget so that can reuse in other places in the application (sales configuration, sale seat map in Box Office module, etc).

Gravity

widget react redux rest api webpack gulp

- Developed widgets (providing as an iframe) for customers so that they can put on their website. An innovative topic, worked directly with colleagues in Switzerland.
- Implemented REST API to provide data to the Frontend. Built UI component, widget to be embedded/plugged-in customer's website or application.
